Problema 5 - Seminor 2 - Geometrie.

2.5) Seterminati numatrul roal λ estfel Encot cosinumul anghinleni format de vectorii $\vec{p} = i+2j+1$ k si $\vec{q} = 3i+j$ sa fie egal cu $\frac{5}{12}$.

Notam cu « unghiul format de vectorii p 1 2.

$$5 = \frac{5}{\sqrt{5+\lambda^2} \cdot \sqrt{10}} = \frac{5}{12} \Rightarrow \sqrt{5+\lambda^2} \cdot \sqrt{10} = 12 \quad 1^2 = 5$$

$$\Rightarrow 10(5+12) = 144 \Rightarrow 50 + 1012 = 144 = 121 = 1$$

=>
$$5\lambda^2 = +2-25 \Rightarrow 5\lambda^2 = 47 \Rightarrow \lambda = \pm \sqrt{\frac{47}{5}}$$

Formule foloxik: \a = x\langle + y\langle + 2\k \b=x'\langle + y'\langle + 2'\k\

$$\| \overline{a} \| = \sqrt{x^2 + y^2 + z^2}$$

$$\vec{a} \cdot \vec{b} = ||\vec{a}|| \cdot ||\vec{b}|| \cdot \cos \alpha \Rightarrow \cos \alpha = \frac{\vec{a} \cdot \vec{b}}{||\vec{a}|| \cdot ||\vec{b}||}$$
